

jobs in lower-carbon applications, 2) train future workers for new, clean energy jobs, and 3) intentionally address historical economic, environmental and social challenges.

For decades, Louisiana has been an energy state, with more oil and gas jobs per capita, more pipelines per square mile, and more energy ingenuity than anywhere in the United States. Louisiana is ranked amongst the highest states in terms of total energy consumption. This partnership allows for a transition to a new energy economy, contributing to cleaner and more sustainable ways of living.

By participating in the H2theFuture project, Xavier and our students will be central in efforts that will work at decarbonizing the South Louisiana industrial corridor, said
